TOXICOLOGY

VOLUME CONTENTS

Volume 58 (1989)

Lipid peroxidation and the metabolism of glutathione in rat liver and brain following ethylene oxide inhalation **(Repeated exposure enhances microsomal lipid peroxidation in liver, possibly as a result of repeated glutathione depletion)**
By T. Katoh, K. Higashi, N. Inoue and I. Tanaka (Kitakyushu, Japan) ..... 1—9

Response of mouse brain to a single subcutaneous injection of the monofunctional sulfur mustard, butyl 2-chloroethyl sulfide (BCS) **(Within 1 h, BCS produces biochemical alterations consistent with oxidative stress and lipid peroxidation)**
by N.M. Elsayed, S.T. Omaye, G.J. Klain, J.L. Inase, E.T. Dahlberg, C.R. Wheeler and D.W. Korte, Jr., (San Francisco, CA) ..... 11—20

Thioacetamide-induced changes in hepatic hexokinase isoenzymes **(Thioacetamide predominantly eliminates cells with high K_m hexokinase increasing the relative proportion of low K_m isoenzyme. i.e. changing the hepatic cell population)**
by G.M. Lawrence, A.C.H. Beesley, M.A. Jepson and D.G. Walker (Leicester, Newcastle Upon Tyne and Birmingham, UK)..... 21—31

In vitro and in vivo nephrotoxicity of the L and D isomers of *S*-(1,2-dichlorovinyl)-cysteine **(Both isomers are nephrotoxic and a good correlation between in vivo and in vitro data was found)**
G.H.I. Wolfgang, A.J. Gandolfi, J.L. Stevens and K. Brendel (Tucson, AZ and Lake Placid, NY)..... 33—42.

Nephrotoxicity of *para*-substituted thiobenzamide derivatives in the rat **(Electron-donating *para*-substituted thiobenzamides produce dose-dependent renal injury, dependent upon oxidative biotransformation)**
by G.J. Traiger, L.M. Grammal, D.N. Cox and W.M. Haschek (Lawrence, KS and Urbana, IL)..... 43—56

Factors influencing the induction of DNA single strand breaks in rats by 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (TCDD) **(In liver nuclei, TCDD may increase availability of iron which leads to enhanced DNA single strand breaks and lipid peroxidation)**
by Z.Z. Wahba, T.W. Lawson, W.J. Murray and S.J. Stohs (Omaha, NE) ..... 57—69

A possible cellular mechanism of cisplatin-induced nephrotoxicity **(It is suggested that nephrotoxic effects are related to mitochondrial DNA)**
by G. Singh (Hamilton, Ontario)..... 71—80

Toxicity and metabolism of a new insect repellant *N,N,*-diethylphenylacetamide in mice, rats and guinea pigs on cutaneous application **(The repellent has a fairly low toxicity and is metabolized by *N*-dealkylation and dydrolysis)**
by S.S. Rao, R.V. Swamy and P.K. Ramachandran (Gwalior, India)..... 81—89

Short communication

Effect of diphenhydramine on organophosphorus insecticide toxicity in mice **(Diphenhydramine seems to have protective effects against commercial organophosphorus insecticide mixtures)**
by F.K. Mohammad, N.A. Al-Kassim and A.R. Abdul-Latif (Mosul, Iraq) ..... 91—95

Letter to the Editor..... 97—101

Announcement..... 103—104

Contents of Journals relating to Toxicology ..... 105—106

Flow cytometric comparison of the effects of trialkyltins on the murine erythroleukemic cell **(Fixation (protein denaturation, cross-linking etc.) appears to be an important mode of organotin cytotoxicity))**
by R.M. Zucker, K.H. Elstein, R.E. Easterling and E.J. Massaro (Research Triangle Park, NC)..... 107—119

Dose-response relationship between urinary cadmium and β_2-microglobulin in a Japanese environmentally cadmium exposed population (**Urinary Cd concentrations corresponding to beta-2-microglubulinuria are 3.8 to 4.1 μg/Cd g creatinine**)
by M. Ishizaki, T. Kido, R. Honda, I. Tsuritani, Y. Yamada, H. Nakagawa and K. Nogawa (Ishikawa, Japan) ..... 121—131

Species differences in testicular necrosis and DNA damage, distribution and metabolism of 1,2-dibromo-3-chloropropane (DBCP) (**Rats and guinea pigs are more sensitive than mice and hamsters due to more rapid activation and greater accumulation**)
by M. Låg, E.J. Søderlund, G. Brunborg, J.E. Dahl, J.A. Holme, J.G. Omichinski, S.D. Nelson and E. Dybing (Oslo, Norway and Seattle, WA) ..... 133—144

Mucopolysaccharidosis and lipidosis in rats treated with tilorone analogues (**Not only tilorone but also some analogues cause mucopolysaccharidosis**)
by L. Hein and R. Lüllmann-Rauch (Kiel, FRG) ..... 145—154

The effect of *m*-xylene on rat lung benzo[*a*]pyrene metabolism and microsomal membrane lipids: comparison with *p*-xylene (***m*-xylene inhibits benzo[*a*]pyrene detoxification, but does not produce alterations in microsomal phospholipid content, membrane fluidity or in lipid peroxidation**)
by J.A. Stickney, A.E. Roberts, D.M. Silverman and R.A. Schatz (Boston, MA) ..... 155—165

The central nervous system may be involved in TCDD toxicity (**Intracerebroventricular application by minipump is comparatively more effective than peripheral application**)
by R. Pohjanvirta, L. Tuomisto and J. Tuomisto (Kuopio, Finland) ..... 167—174

Protective effects of DL-*α*-lipoic acid on cadmium-induced deterioration of rat hepatocytes (**Lipoic acid diminishes Cd Uptake and membrane damage at the lower Cd concentration tested (200 μm)**)
by L. Müller (Düsseldorf, FRG) ..... 175—185

The implication of renal glutathione levels in mercuric chloride nephrotoxicity (**Glutathione depletion enhances mercury-induced nephropathy**)
by G. Guillermina, T.M. Adriana and E.M. Monica (Rosario, Argentina) ..... 187—195

Correlation between the lipophilicity of substituted phenols and their inhibition of the Na^+/K^+-ATPase of Chinese hamster ovary cells (**There are good correlations between lipophilicity and other physical parameters and the effect on various biological systems**)
by I. Cascorbi and J. Ahlers (Berlin, FRG) ..... 197—210

The influence of growth phase and culture conditions of *Tetrahymena* on effects of cadmium (**The interference of cadmium with these cultured organisms is of complex and unique nature**)
by J. Larsen (Copenhagen, Denmark) ..... 211—223

Book Review ..... 225—229

Announcement ..... 231—232

Contents of Journals relating to Toxicology ..... 233—234

Editors Note 235

Toxicity of quinine
by F. Berglund (Stockholm, Sweden) ..... 237—238

Dichloroacetic acid and trichloroacetic acid-induced DNA strand breaks are independent of peroxisome proliferation (**Peroxisome proliferation does not contribute to the induction of DNA breaks**)
by M.A. Nelson, A.J. Lansing, I.M. Sanchez, R.J. Bull and D.L. Springer (Pullman and Richland, WA) .. 239—248

Dose-related effects of enzyme-generated oxidants on the biochemistry and morphology of the hamster lung (**Biochemical and histopathological changes were indicative of rapid and dose-dependent development of fibrosis**)
by J.M. Nakashima, D.M. Hyde and S.N. Giri (Davis, CA) ..... 249—266

Marked alterations in retinoid homeostasis of Sprague—Dawley rats induced by a single i.p. dose of 10 μg/kg of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (**TCDD depletes tissue stores of retinoids and increases their urinary excretion**)
by A. Brouwer, H. Håkansson, A. Kukler, K.J. Van Den Berg and U.G. Ahlborg (Wageningen and Rijswijk, The Netherlands and Stockholm, Sweden) ..... 267—283

Biochemical toxicology of argemone oil. IV Short-term oral feeding response in rats (**A description of the toxic effects on various organs**)
by K.K. Upreti, M. Das, A. Kumar, G.B. Singh and S.K. Khanna (Lucknow, India) ..... 285—298

Lipid peroxidation in rat liver microsomes: influence on carcinogenic *N*-nitrosocarbaryl **(In vitro and in vivo nitroso compounds have differential influences on various microsomal activities and lipoid peroxidation)**
by M. Beraud, M.-F. Forgue, B. Pipy, A. Didier and P. Carre (Toulouse, France) ..... 299—311
The rate of the in vivo dithiocarbamate-induced mobilization of hepatic and renal cadmium deposits **(Cd mobilization is determined by molecular structural features of the dithiocarbamates which control their access to intracellular sites of aged Cd)**
by M.M. Jones, G.R. Gale, P.K. Singh and A.B. Smith (Nashville, TN and Charleston, SC) ..... 313—323
Early changes in the tissue distribution of cadmium after oral but not intravenous cadmium exposure **(An explanation is offered why parenteral Cd produces liver toxicity while oral administration causes renal damage)**
by M.M. Jonah and M.H. Bhattacharyya (Argonne, IL) ..... 325—338
Announcement 339
Contents of journals relating to Toxicology ..... 341—342
Subject Index Volume 58 ..... 343—346
Author Index Volume 58 ..... 347—348
Volume Contents Volume 58 ..... 349—351
